

Shown is the old and new location for the engine run wire for the Vegistroke System. While on the old location the wire colors would change from year to year, in the new location the wire color is solid Red for all years 2002-2007. Relocating this wire will resolve the issue with the Radio staying on after shutting down the system. This will allow the door to disable the accessory delay while the truck is doing a shutdown, just like when the truck is off. Factory alarm and door locks should also work normal.
